## *The solution to steering, seating and control*

The Unihelm is the all-in-one helm and seating system for your rigid hull inflatable. The Unihelm is fabricated of polished 316L stainless steel and marine grade vinyl upholstery for years of services and comfort.

With the fully welded stainless steel helm enclosure housing a Uflex steering helm and a welded mounting plate for your shift control, the Unihelm provides a rock solid, stable steering system with unlimited foot room. Ample room under the seat provides storage for your gas tank and/or battery.

Each Unihelm is custom fabricated to fit your individual boat, making installation truly yacht quality. Deck mounting plates are pre-drilled for fasteners, making installation fast and easy. The framework of the Unihelm is entirely welded of stainless steel

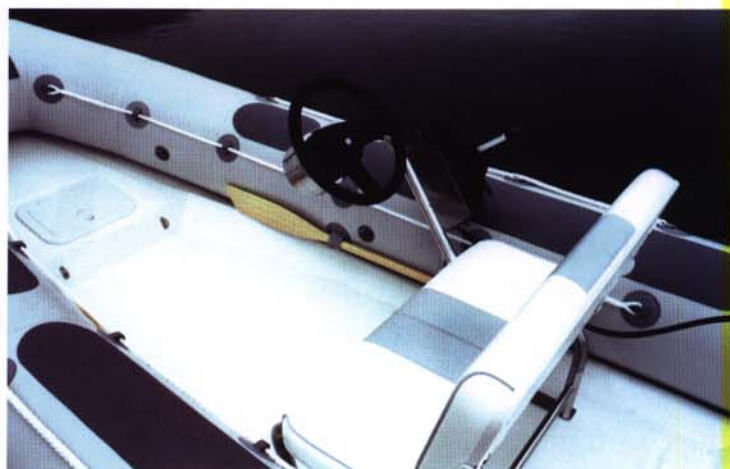

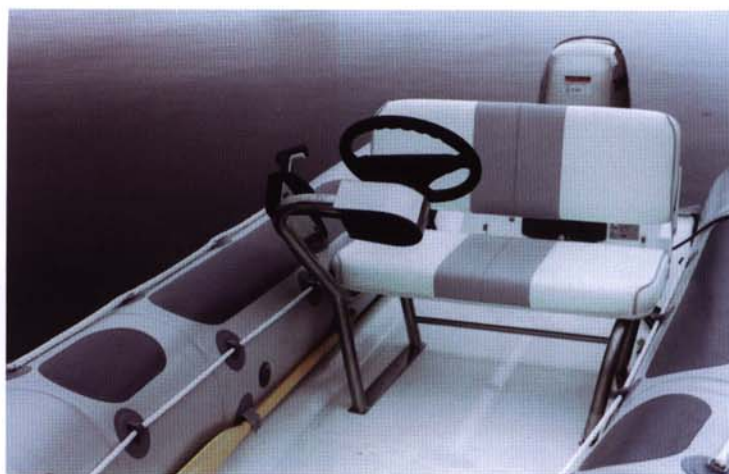

for strength and rigidity, then hand polished, providing years of reliable service.

The helm is mounted in a compact stainless steel enclosure for strength and protection from the elements.

Switches can be mounted in the pre-drilled holes, providing a convenient location for your electrical needs. The welded shift control plate provides sturdy mounting for the customer supplied engine controls. A standard 13.5"

diameter steering wheel provides a comfortable grip and quick steering response. The supplied steering cable connects through the industry-standard tilt tube on your outboard.

The Unihelm is the original solution to steering, seating and control designed for inflatable boats.
